protecting people since 1926

protecting people is the core
mission of the uvex brand.
Our aim and our motivation.

uvex is the world's leading producer of protective products and has global manufacturing expertise.

Cutting-edge technologies and solutions. Customer-oriented services and specific training programmes for personal protective equipment. These are the reasons everyone who places their trust in us benefits from the best possible protection for sports, leisure and at work.

"Made in uvex" is our promise of quality. So, we set demanding standards for our products and our production facilities and our network of partners.

At uvex people are our primary focus: whether a customer, employee or partner. We work to balance economy, ecology and social commitment and conscientiously follow the philosophy of "business is people".

with uvex safety

Red Bull District Ride
in Nuremberg, Germany

Tsunami backflip by
uvex rider Szymon Godziek

one brand. one mission. one vision.

September 2014: knights of the modern era gather once again to kick up a storm at the Red Bull District Ride in Nuremberg old town, in front of 120,000 spectators. Team uvex was in the middle of the action – double strength.

The Red Bull District Ride is one of the world's most spectacular slopestyle bike competitions, and one of 5 events in the 2014 FMB World Tour Diamond Series for freestyle MTB.

Riders start with an 8-meter drop off the castle wall, full speed over steps, obstacles and dirt hills towards the climax of the competition:

Shooting out of a window in Nuremberg Town Hall, riders grab their first chance for big air. Flying up to 10 metres off the ground,

they land up to 15 metres later in the main square.

When tricks and jumps go close to the rider's limit, it is vital that only professionals should have their hands in the game.

For this reason the organisers relied on uvex safety to kit out the craftsmen who were tasked with building the circuit, from head to toe in uvex safety products.

uvex sports was on the start line at the Red Bull District Ride. uvex core athletes – riders Simon Kirchmann, Lukas Knopf, Magnus Baumann und Szymon Godziek – were there too. Szymon showed the crowd in Nuremberg why he is one of the best slopestyle riders in the world.

Before the District Ride, Szymon had collaborated with uvex to design his own signature range of helmets and eyewear, available as a limited edition. At uvex headquarters in Fürth, Germany he met with product developers and followed the equipment manufacturing process. Clearly this young Polish rider feels extremely safe using uvex equipment.

In the main square Szymon Godziek landed the first Tsunami Backflip in an official competition.

Tens of thousands celebrated with the uvex team rider, who secured the award for Best Trick with this jump.

Michael Knipfer | tm studios visuelle medien GmbH

epic equip- ment

Eight stages, 748 kilometers. Strength sapping climbs, swift descents and gruelling trails. No one on the start line of Cape Epic should make any compromises – in their preparation or their choice of equipment.

Cape Epic is a legendary race, like a Tour de France for mountain bikers.

Every March, some of the world's best marathon mountain bike riders and hundreds of amateur athletes gather in South Africa to ride for 8 consecutive days, covering a distance of 748 km and 16,000 metres of climbing.

In 2015, 1,200 riders began their bike adventure with a prologue in Kapstadt, then another 7 stages before they raced across the finish line in the Meerendal Wine Estate in Durbanville.

German professional athlete Karl Platt has won Cape Epic four times.

Yet again he raced, relying on uvex's high-tech protection. In addition to a perfectly

fitting, well-ventilated helmet riders like Karl Platt need, above all:

A clear view in all conditions. Guaranteed in eyewear with variomatic® technology.

The automatic, self-tinting lens reacts instantly to the prevailing light conditions, whether low lying sun or unexpected rain shower. Its specially shaped lens provides a perfect field of view. Flexible nose pads and rubberised tips on the legs ensure a perfect fit, no matter how rough the track gets – a regular feature of Cape Epic.

The route travels through remote areas, along dusty tracks and over muddy terrain – in a region well known for unpredictable weather changes.

For this reason, each team has two riders: so they can help each other out at any time.

The Bulls Team of Karl Platt and Urs Huber achieved third place overall with a total time of 31 hours, 35 minutes and 23 seconds.

“It was a hard fight,” said a delighted Karl Platt after the race.

“Yet again we have had ups and downs. But now we are proud to be here on the podium at Cape Epic.”

**Guaranteed quality
and pure function:
“Engineered in Germany”**

uvex, as a global company, manufactures at carefully selected international locations.

All eyewear development and testing takes place exclusively in Germany. For over 50 years the term 'German Engineering' has been recognised throughout the world as being synonymous with top quality.

uvex designs follow three simple principles: simplicity of form, truth to material, ease of use.

Good design should be honest, unobtrusive and aesthetically pleasing:

“We work to continually improve our products by focusing on the essentials,” says Matthias Adler, Brand Portfolio Manager at uvex sports. “Using more than 90 years of experience, our love of attention to

detail, we work as a team with our international partners to share the values and skill which have made German Engineering famous worldwide.”

To serve our customers our process involves exacting quality management, carrying out rigorous testing, and continuously setting new standards in safety.

We analyse and incorporate constructive feedback from more than 1,000 uvex-equipped elite athletes. We integrate in-house innovations with new technologies from our partners, such as variotronic®, our split-second reaction lens.

Good design is continuously being refined, just like technology and culture.

Matthias Adler sums it up for uvex as “We are strong. Yet understated.”

A glimpse into
sports eyewear creation

**ENGINEERED IN
GERMANY**

behind the scenes

Technology eyewear

protection // lens // comfort
The philosophy of our technology is based on three key factors: protection for the eyes, perfect fit and exceptional comfort.

[safety tested]

We test for the future

uvex eyewear undergoes special tests in our uvex testing center. We can fully guarantee quality-tested safety and function.

Testing generates new insights and data which help us develop the next generation of innovative technologies.

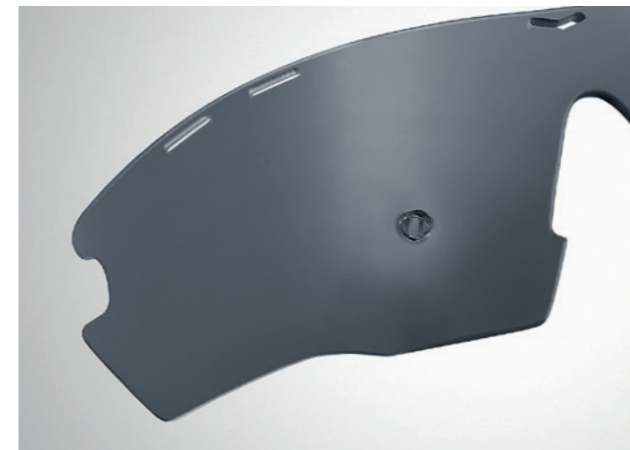

[break resistant]

Impact 162 km/h

uvex eyewear is tested in accordance with standard EN ISO 12312-1:2013. This includes a demanding impact test: a 6 mm steel ball, weighing 0.86 g is fired at the lens at a speed of 45 m/s (162 km/h).

Mechanical strength is assured – and your eyes are safe.

Dent in test lens after undergoing an impact test – the steel ball does not pass through the lens.

Impact testing equipment in the uvex testing centre.

[UV protection]

uv-ex = ultraviolet excluded

visible light
780 nm - 380 nm

UV light
(UVA, UVB, UVC)

UV-absorbing filters built directly into the raw material protect the retina 100% from damaging UV rays up to 400 nm. All lenses give 100% UVA, UVB and UVC protection. It is also the basis of our company name.

uv-ex = ultraviolet excluded

[variomatic®]

Panoramic automatic lens

curve 10 lens – automatic, stepless shading

Glasses to be proud of: **curve 10** lens gives **uvex variomatic®** a panoramic, wide angle view. **curve 10** lenses offer a full 1 cm more curvature, compared to standard flat lenses. As well as extending your peripheral vision, the shape of this lens

offers greater coverage and improves side protection against sun, draughts and impact.

Thanks to **uvex variomatic®** technology the photochromic lens reacts automatically, smoothly changing its level of shade, in response

to the prevailing light conditions. **uvex** photosensitive sports eyewear is available in three (S1-S3) or four (S0-S3) protection levels.

Extra features: **supravision®** technology for fog-free vision, **easy to clean** coating sheds dirt, water, sweat.

S0 — S1 — S2 — S3

Smooth transition lens tinting reacts to the light condition

Standard lens – visual and protection area

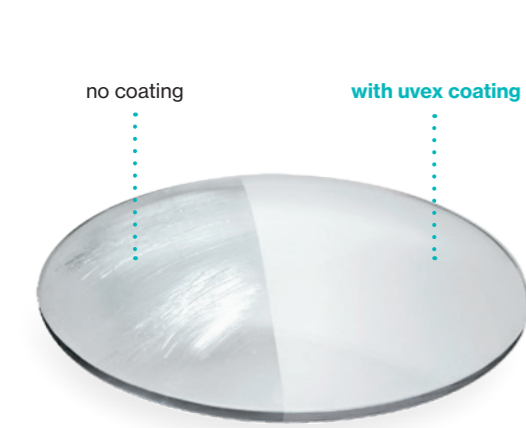

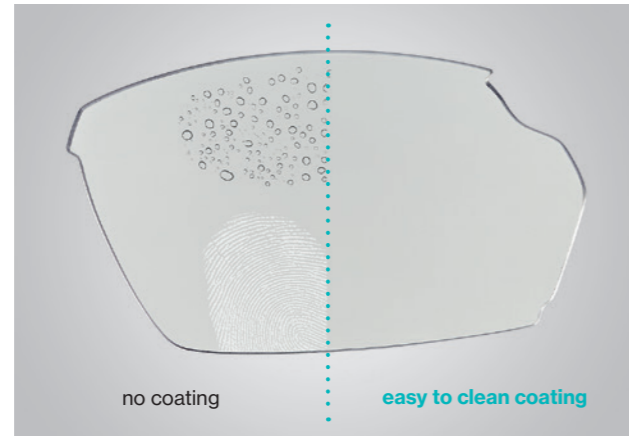

curve 10 lens – visual and protection area

Enhanced vision and more protection thanks to curve 10 technology

[easy to clean]
Easy cleaning

Special surface coating makes moisture and fingerprints easy to remove from the lens.

Easy to clean coating is anti-static – repels dirt and dust – for the clearest vision in the most extreme conditions.

[robust and scratch-proof]
Visibly more protection

Lenses are made from durable polycarbonate, which maintains its mechanical strength down to temperatures as low as minus 40 °C. Special coating protects the lenses from damage –

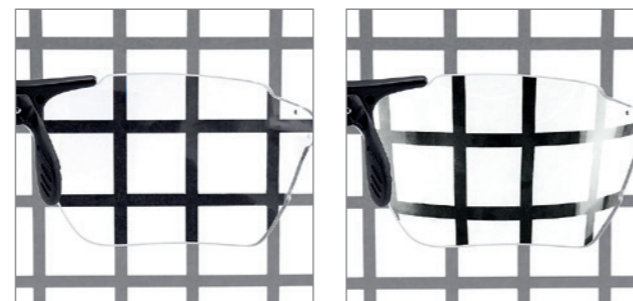

scratch resistant, without impairing optical clarity – in accordance with standard EN ISO 12312-1.

Outer lens resists scratches and marks (excludes mirror lenses).

[decentered lens technology]
Distortion-free

Distortions and curving in the field of view can be distracting. uvex Class 1 injected, decentered lenses ensure clear, distortion-free vision.

Suitable for action sports which leave no room for error.

with decentering:
distortion-free view

without decentering:
distorted view

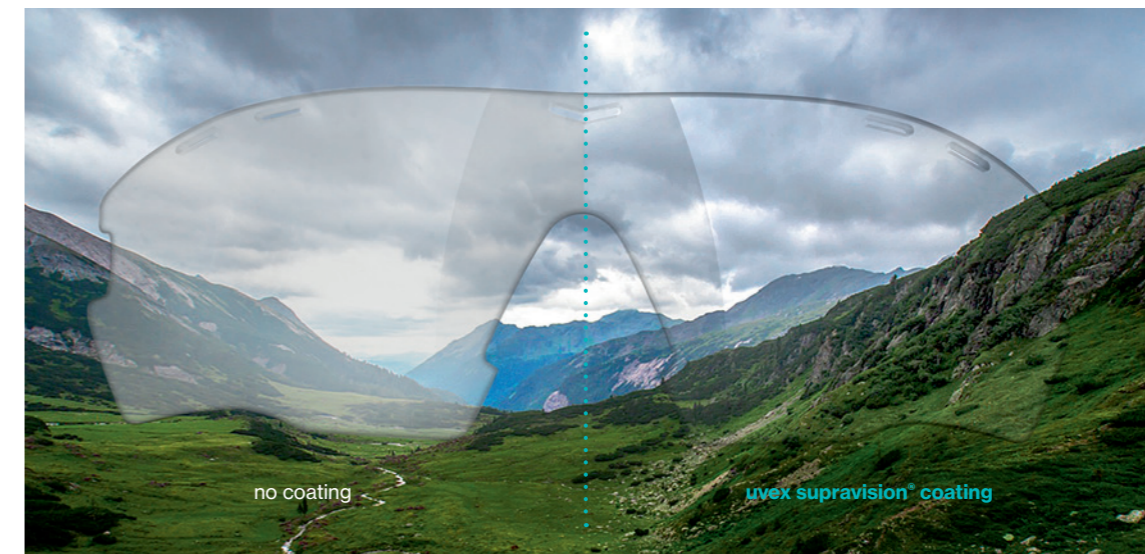

[polavision®]
Improved perception

Reliable protection against reflections and glare. Lenses in the polavision® range absorb diffused light to protect the eyes from strain.

Eliminate distracting reflections and glare and transform them to comfortable levels.

[supravision®]
Ultimate anti-fog coating

Special surface treatment ensures fog-free vision – without altering the optical quality of the lens.

[lens types]

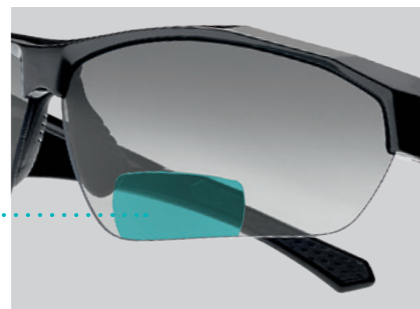

The perfect lens for every situation

Light condition	low light	medium bright // bright	bright	glare *
Protection level	S0	S1-S2	S3	S4

basic	clear (S0)		smoke (S3) brown (S3)	smoke (S4)

*Not suitable for use in the car

[bifocal]

Clear vision at every distance

Incorporated lens

One lens – doubly sharp vision: bifocal lenses are a smart solution for far sighted spectacle wearers.

Bifocal lenses (bi = two / focus = focal point) combine two lenses in one. A regular lens for distance plus a lens for near vision. Bifocal eyewear is available in three strengths: +1.5 / +2.0 / +2.5.

[soft nose pads – soft earpieces]

For the perfect fit

Follow your nose: optimal fit and highest comfort.

Form follows function: flexible legs for perfect fit.

Eyewear fits perfectly when you can't feel you're wearing it.

Soft nose pads and soft ear pieces ensure pressure-free comfort. Many models feature cold-formable soft-finish legs – easy to ensure the perfect fit.

[direct lens ventilation]

Draught-free ventilation for clear vision

uvex climate technology provides permanent, draught-free ventilation. This way the field of view is always fog-free.

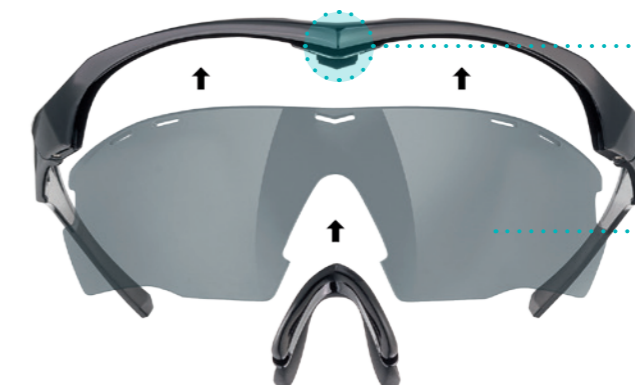

[interchangeable lens construction]

Eyewear for all occasions

Perfect eyewear with the perfect lens, always.

uvex interchangeable lens technology guarantees ease of use and optimal vision in every weather.

Fast change in just one click

Wide choice of lenses for perfect vision in every situation

vario- tronic®

The future is here: uvex
variotronic® brings
revolutionary technology
into focus.

[varioptronic®]

Lens tinting in 0.1 second

pioneering technology

instant advantage

Revolutionary: **uvex varioptronic® technology** is a class above – in just **0.1 second**: pressing the button or using the built-in light sensor triggers electrochromatic activation of a liquid crystal film on the polycarbonate lens.

A sensor constantly monitors light intensity and **changes transmission from 64% (light) to 16% (dark)**. The e-Tint® liquid crystals in this high-tech

lens modify the level of shade in an instant. All powered by a built-in battery, rechargeable via USB.

This revolutionary lens technology stems from our exclusive partnership with US experts at AlphaMicron.

uvex varioptronic® is available in Sports Shield or a full-frame option optimised for mountain bikers.

0.1 sec
reaction time

Liquid crystal film changes light transmission in less than 0.1 second.

[variotronic®]

Automatic or manual – the perfect lens for every light condition

The ultimate combination of innovation and revolution:
light transmission of the lens is modified in just
0.1 second – automatically or at the touch of a button.

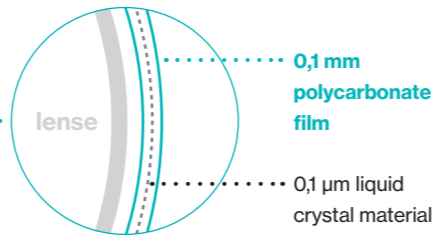

Transmission

Light transmission of the lens
is 64% (S1) or 16% (S2).

Liquid crystal film

Electrochromatically activated
liquid crystal darkens the lens.

Light sensor

Built-in sensor automatically
reacts to ambient light.

Press the button

Choose from three
operating modes:
on, off, automatic.

USB rechargeable battery

Long life lithium ion battery:
recharge via mini USB,
lasts up to 50 hours.
