helmets Technology

PROTECTION // FIT // COMFORT

There are demands. Standards. And there is uvex. We don't just comply with high demands, expectations and standards, we exceed them.

PROTECTION

technology

[tested to standards | safety tested]

We test the future. Guaranteed safe.

Every uvex cycling helmet meets the most stringent international safety requirements for personal protective equipment. Advanced testing procedures enable us to develop new quality standards today – for our helmets of tomorrow.

CPSC

USA cycling helmet standards

CE

European helmet standards

DIN
EN 1078

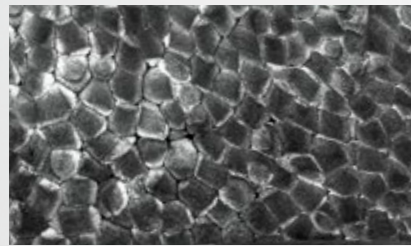

Plus TÜV tested

[shell materials]

High-tech in all layers

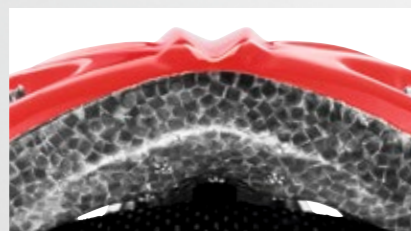

Inner material

EPS hardshell // inmould

Protective material contains microscopic air chambers. They effectively absorb the impact forces created in a fall.

Outer material

PC inmould // double inmould

Strongly bonded polycarbonate shell for safety. Double inmould for extra protection around the lower edge.

CFK hardshell

Carbon fibre strengthened polymer for ultralight high-end helmets.

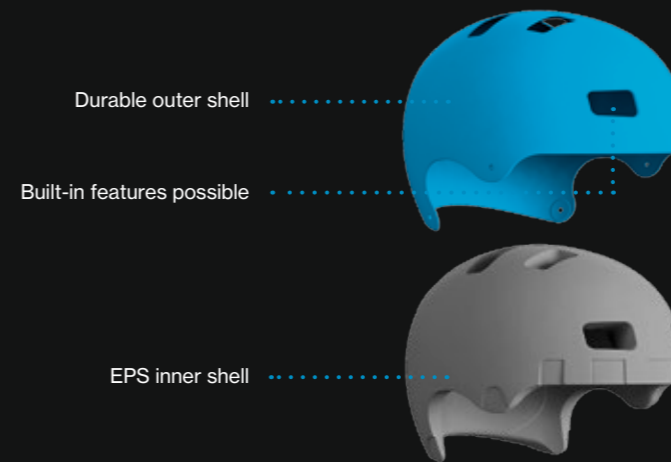

ABS hardshell

This proven technology protects the head with a hard shell – and is highly effective.

helmets // technology // protection

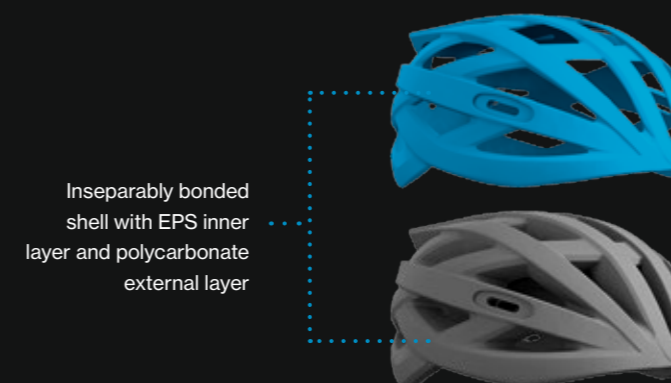

[shell construction]

The best of the best

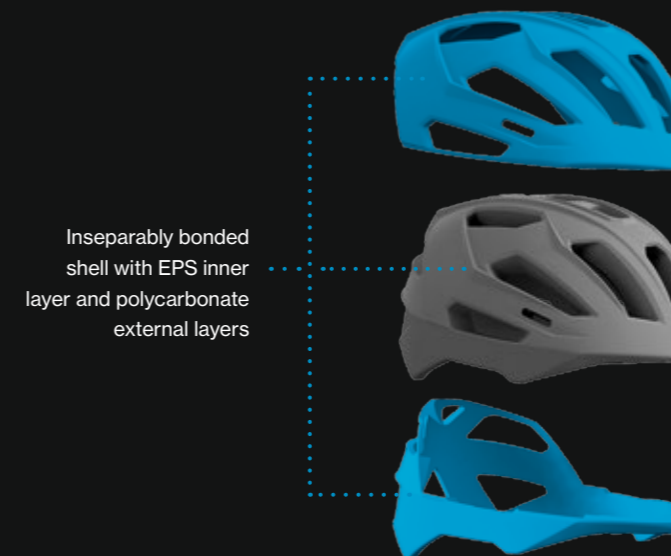

hardshell technology

Comprising an injection moulded outer shell and an EPS inner shell. A highly effective safety combination: impact-resistant outside, shock absorbing inside. Highlight: this complex construction enables installation of perfectly placed air vents and channels. For maximum safety and superb wearing comfort.

inmould technology

Protective EPS material is foamed directly into the polycarbonate shell. For a lightweight helmet with highest impact resistance. Perfect fusion of EPS inner layer and polycarbonate outer layer.

double inmould technology

All the benefits of inmould construction plus complete all-round protection via a second polycarbonate shell. Protects the outer edge from damage and looks good too.

FIT

technology

[shell sizes]

Fits all heads

Every head is different. This is why we offer a range of shell sizes for the optimal fit.

Head circumference + head shape
= perfect fit

[fit systems]

IAS and BOA offer maximum adjustment

uvex uses the most advanced IAS and BOA fit systems, to offer maximum adjustment to every individual head shape. Like the helmet was made to measure.

Different head shapes → yet the same head circumference
Individual adjustment via uvex fit systems

[BOA]

All new. All improved. All BOA.

Now optimized for cycling helmets, the unique BOA system is exclusive to uvex road helmets. Combining an ingeniously simple system with high performance materials from the aerospace industry improves comfort, performance and safety.

High-tech partnership with Boa Technology Inc.

Flexible polyamide (PA) bands on three sides of the helmet ensure optimal fit on the head.

Fine tuning with micro adjustment

Secure fit via ratchet dial

Easy

The BOA wheel can be adjusted with one hand.

Comfortable

1 click = 1 mm.
For the perfect fit on every head.

Safe

The selected setting stays.
For fantastic fit.

[IAS | IAS 3D]

IAS systems at a glance

Having the same head circumference does not necessarily guarantee that a helmet can provide maximum safety and comfort. Not just the width is crucial,

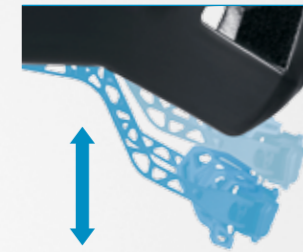

also the length of the head. Advanced fit systems provide the perfect adjustment, in every direction, to match every individual head shape.

[IAS | IAS 3D]

Width adjustment
Adjusts to the individual head circumference

Height adjustment
Adjusts to the individual head size

[FAS]

Simple and practical

Fast Adapting System webbing can be easily and continuously tailored to your exact head shape. The helmet stays securely on the head in all situations and the webbing straps are always in the best position.

Individual anatomy

→ Optimised, fast adjustment with uvex FAS webbing

[monomatic]

Button press adjustment

uvex monomatic comfort closure can be opened and closed with one hand. The chin strap adjusts at the touch of a button: wearing over a hat in cooler weather or if extra ventilation and comfort are needed on a hot climb.

COMFORT

technology

[removable lining]

Interchangeable liner

Interior features significantly affect a helmet's comfort. All our pads absorb moisture and are anti-allergenic. Hook and loop fasteners allow easy removal for washing.

basic pads

Functional padding with special antibacterial finish.

vent pads

High quality moisture wicking material with embossed ventilation channels. Comfortable and soft on the skin, dries quickly and is antibacterial, removable and washable.

x-fit pads

High quality, structured material improves ventilation. Removable and washable. Padding has a special antibacterial finish.

vent carbon pads

Moisture wicking material with carbon fibres. Ventilation channels and perforated pads ensure optimal helmet climate. Comfortable to wear, antibacterial, quick drying and washable.

helmets // technology // comfort

[vent system]

EDAero = optimised ventilation. Optimised aerodynamics.

For all its helmets uvex values optimal ventilation performance: cleverly designed ventilation channels expel warm air and draw in fresh air. To prevent uncomfortable heat build-up.

uvex EDAero [uvex EveryDayAerodynamics] minimises air turbulence while improving aerodynamic performance. Compared with traditional aero sprint helmets up to 16 watts less effort is required to achieve the same speed.

Fresh wind

Central ventilation aids airflow through the helmet.

Cool head

Well ventilated areas have a lower temperature.

Less vortex

Outer channels have no exit to reduce flow separation zones.

Fast forward

Significant airflow separation happens first in the wake.

Rider

KEEP COOL

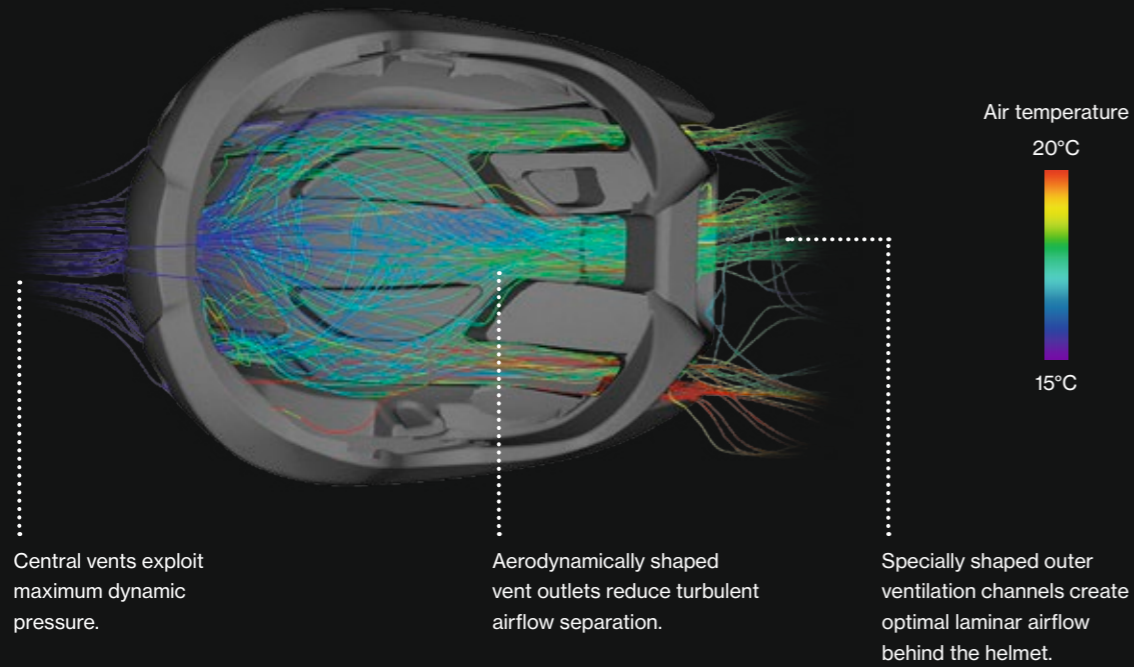

YOU'RE THE

FASTEST

uvex EDAero
[uvex EverydayAerodynamics]
developed with Marcel Kittel

uvex EDAero – the fastest uvex helmet in its class – plus optimal ventilation.

We don't want to create waves with this helmet. But the uvex EDAero does a lot: it cleverly directs airflow where it should go and keeps a cool head even in the hottest situations.

16 watts

power saving relative to conventional aero sprint helmets. Over a distance of

40 km

at an average speed of approx.

38 km/h

in about

1 min. 25 s*

Marcel Kittel, winner of multiple Tour de France stages, was involved in its development. And has produced record breaking results...

*optimal laboratory conditions, average power 250 W

More on this helmet:
uvex-sports.com/edaero

DEVELOP- MENT

Story

The story of two protagonists: Marcel Kittel and the uvex EDAero

1 Helmet Design

Collaborating with sprinting ace Marcel Kittel presents us with a special challenge. Develop a helmet combining the highest level of comfort with the demands of pro cyclists.

2 Test Phase

Wearing uvex EDAero Marcel Kittel is up to 0.6 km/h faster for the same power output during testing by Formula 1 experts from Bionic Surface Technologies (BST).

3 Video-shoot

The production team travels to the Sierra Nevada in Spain, where Marcel Kittel is training: he drops by for the shoot, in front of a black backdrop, in the saddle.

4 Campaign

In the can – and shows the best ventilation characteristics in combination with outstanding aerodynamics. Now, the uvex EDAero can be a winner.

eyewear Technology

PROTECTION // FIT // COMFORT

We are ahead. Far ahead. You belong here too. Get a head start with innovative technology. Keep going. To the very top. The place to be.

PROTECTION

technology

[safety tested]

We test for the future too

Every uvex eyewear undergoes rigorous testing in our uvex testing centre. We don't just guarantee the safety and functionality of each eyewear. Our advanced

eyewear test procedures, which already meet the highest quality and safety demands in sports, also help us develop the uvex eyewear of tomorrow.

[UV protection]

uv-ex = ultraviolet excluded

UV absorption is built directly into the raw material and filters 100% UV rays up to 400 nm. All lenses provide 100% UVA, UVB and UVC protection – the basis for our company name:

uv-ex = ultraviolet excluded

LENS

technology

[variomatic]

Automatic lens tinting

variomatic lens technology automatically reacts to every light situation. The photochromic lenses dose the shading in three levels of protection, from S1 to

S3, according to the light conditions. Of course, all uvex lenses provide 100% protection from UVA, UVB and UVC rays.

BAD WEATHER

SUN

automatic, stepless lens adjustment
from light to dark

74%

transmission

9%

[easy to clean]

Clear vision all the time

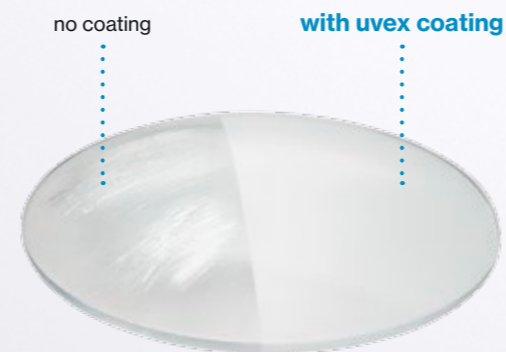

Sweat, water, dirt – nothing which distorts can adhere. For clear vision in extreme conditions. This special coating makes lenses very easy to clean, hence the name: easy to clean.

[robust and scratch-proof]

Safety tested

Extremely durable, the polycarbonate lenses work in temperatures down to -40°C without any loss of mechanical strength. A special coating protects against damage, providing scratch resistance without impairing visibility, according to standard EN 1836. Highly scratch resistant outer lens (excludes mirror lenses).

[litemirror]

Extra protection mirror lenses

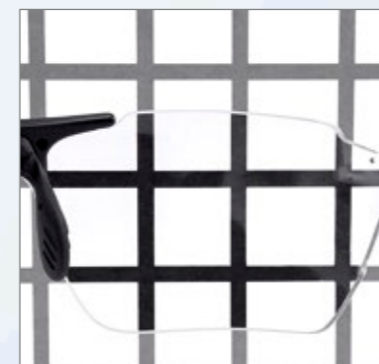

Mirrored lenses look trendy – while working hard. They offer extra protection from infrared rays. Reflecting them and keeping them away from the eyes.

[decentered lens technology]

Distortion-free vision

Distortions and curving in the field of view can easily lead to confusion on the slopes. uvex Class 1 injection moulded decentered lenses deliver clear, distortion-free vision in accordance with EN 174 and are designed for the toughest demands of sports.

with decentring:
distortion-free view

without decentring:
distorted view

[lens types]

The perfect lens for every situation

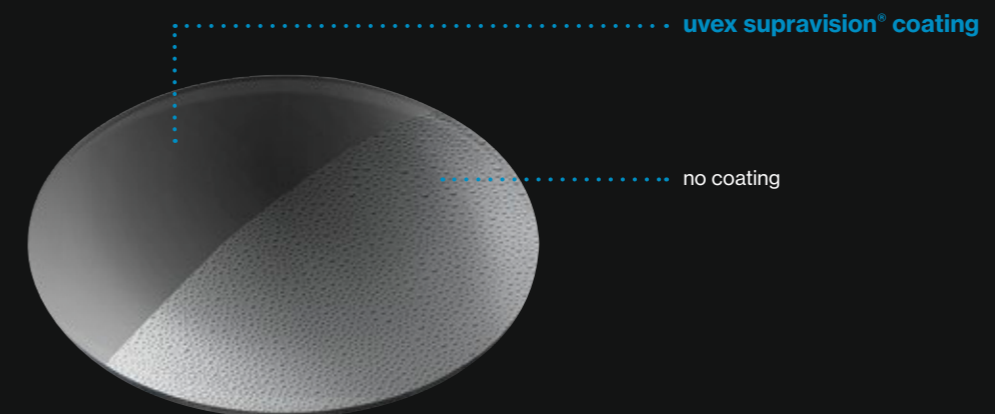

100% ANTI FOG

[supravisión®]

Ultimate anti-fog coating

Fog-free vision every time. Thanks to a special surface treatment which doesn't affect the optical quality of the lens.

COMFORT

technology

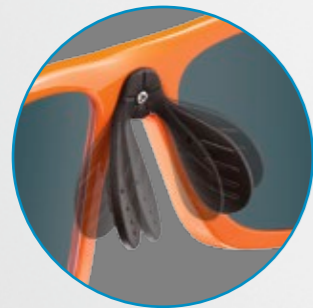

[soft nose pads – soft earpieces]

For the perfect fit

Eyewear fits perfectly when you forget you're wearing it. To ensure pressure-free wearing comfort uvex uses soft nose pads and soft earpieces. The soft-finish legs are cold-formable, for perfect hold.

Form follows function:
flexible legs for perfect fit.

Follow your nose:
optimal fit and
highest comfort.

eyewear // technology // comfort

[direct lens ventilation]

Best vision all the time thanks to clever ventilation

uvex climate competence delivers permanent draught-free ventilation. For long-lasting fog-free vision and cloud-free sports pleasure.

[interchangeable lens construction]

Eyewear for all occasions

Always the right eyewear with the right lens. uvex's foolproof interchangeable lens technology guarantees clear vision for every need.

Extremely easy to change –
in just one click

Wide choice of lenses offer
perfect vision in every situation
